

As we work in practices throughout the network, we discover clinical and/or administrative methods that really work well

A. *What is the best way to make you aware of it so you may decide whether or not to implement it in your practice?*

- 1) Communication in any venue would be helpful. Publishing on OKPRN website after making everyone aware of the resource is one way. Preparing a critique of the method and publishing by regular mail would be another. Another way would be for the PEA to speak with other practices making them aware of the resource or even the method.
- 2) Start with an email correspondence.

B. *How can we most effectively and efficiently help you with implementation?*

- 1) Start coming to visit us again.
- 2) This would depend on the suggestion – i.e. a “tip” on increasing immunizations could just be transmitted by email. Other, more complex administrative or clinical procedures might require a PEA on site for a few days.
