

**How many noro virus cases are you seeing per week?
What percentage are children?
What percentage of those are severe cases?**

1. Saw LOTS the week before (October 7th). Probably 10% of all clinic visits. I admitted one child due to dehydration. 60% were under 18. I see on average 25 patients per day.
2. I do not test for noro virus.
3. I do not know what noro virus is.
4. About 4 per week. No children so far. None need hospitalization but all have significant illness. (At least I think this is what is causing the gastroenteritis going around, I have not tested it)
